

LaunchPad for DreamFactory Utilities

Embed LaunchPad and turn your website into a SaaS site. LaunchPad allows users to launch SnapShot and Monarch directly from your web pages.

Promote SaaS and get closer to your customer, everyday.

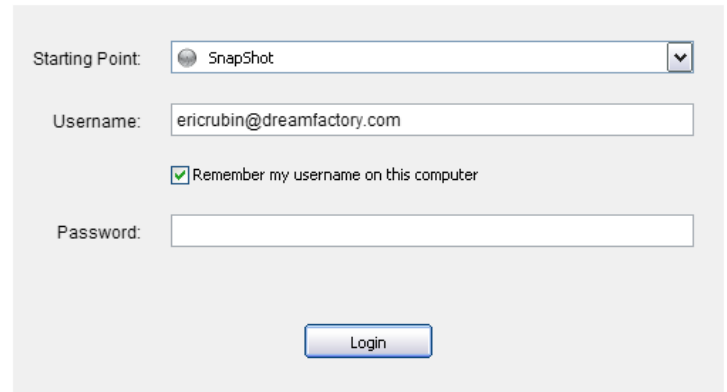

Embed LaunchPad in your website and provide your customers and employees with direct access to the leading Administrator tools for Force.com.

Leverage Login visits for targeted communications with your most important customers.

Provide hassle-free trials with applications that don't require an AppExchange install.

Simplify customer engagements with secure access to customer Orgs from your website via a single user experience, independent of page layouts.

Maintain a direct relationship with your customers

Why send your hard-earned customers to someone else's website? With our Velocity VAR and Referral programs your customers will spend more time on your site.

Our VAR program even enables partners to brand the in-product experience with configurable menus to highlight your unique support and training services.

Program Features:

- Generous revenue sharing
- Partner branding
- Self-service trials, conversions & upsells from partner website
- Internal use licenses

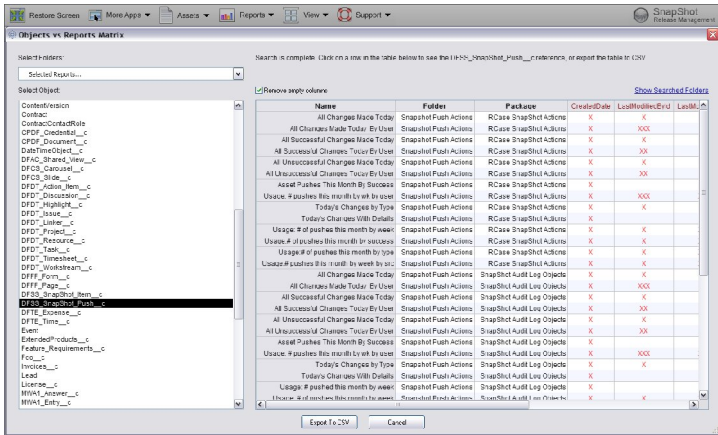

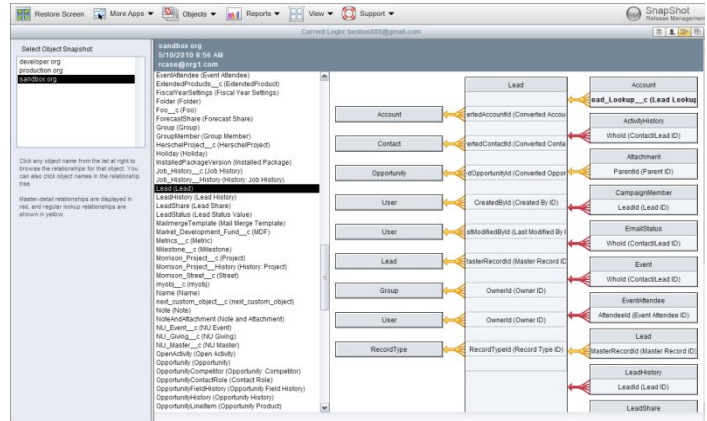

SnapShot & Monarch

Provide direct access to the #1 administrator tools for Force.com from your site. SnapShot & Monarch can run instantaneously without a requirement to install from the AppExchange- offering your customers hassle-free trials.

SnapShot metadata management

SnapShot's rich interactive GUI enables administrators to manage Salesforce customizations without writing code. SnapShot's comprehensive management console allows admins to:

- Capture, compare and diff metadata changes between versions of the same Org or different Orgs.
- Automatically deploy metadata changes between Orgs. Supports partial push, dry run, and category-based metadata selection.
- Rapidly modify schema without page navigations using our rich document editor for profiles and objects.
- Full diff and push operations on all metadata assets including custom objects, page layouts, profiles, workflows, reports, Apex triggers, and more.

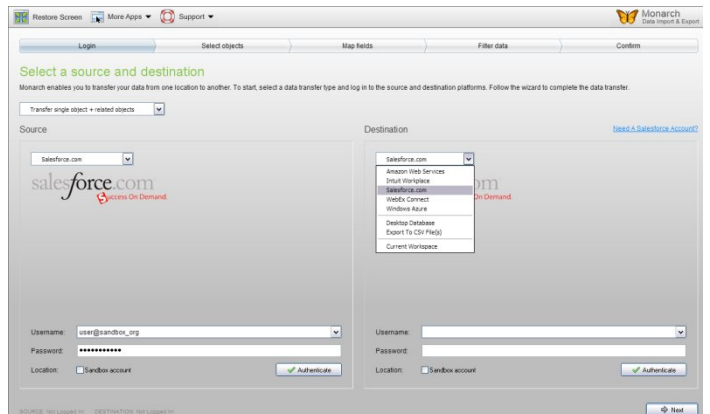

Monarch data management

Monarch enables administrators to easily replicate and merge data between different Salesforce Orgs or between other cloud databases. Data records and related object records can be moved in a single push through an intuitive step-by-step process. Currently supported cloud databases include force.com, Microsoft Azure SQL, Amazon, Cisco Connect, and Intuit Partner Platform.

SnapShot Org reporting

SnapShot's reporting module offers a complete solution for monitoring and documenting all modifications to your Salesforce Org and assist with Sarbanes-Oxley (SOX) compliance and HIPAA regulations. Reports include a data dictionary of objects and fields, map of profiles to page layouts, map of fields to reports, changes by admin, and a host of other key reports.
