

Overview

SnapShot for AppExchange is the one application all Salesforce System Administrators and System Integrators need to effectively manage Salesforce customizations. SnapShot enables users to take a “snapshot” of the object and profile characteristics of any Salesforce ORG.

With DreamFactory’s patented technology, SnapShot provides a highly visual way to look at Salesforce customizations and to track and manage critical changes – in the same ORG over time or between different ORGs. SnapShot offers a powerful schema “push” feature that automates release management between Salesforce deployments. SnapShot is also an indispensable tool to document all modifications to your Salesforce account and to aid with Sarbanes-Oxley compliance or HIPAA regulations.

SnapShot can be used in several ways:

- **SnapShot for Change Management** – Use SnapShot to help support a secure and stable change management process as your Salesforce customizations evolve
- **SnapShot for Release Management** – Use SnapShot to visually compare Salesforce customizations and easily promote schema changes between Development, Sandbox and Production ORGs
- **SnapShot for Auditing & Troubleshooting** – Use SnapShot to record every customization change to a Salesforce ORG and troubleshoot issues

Main Features

- Take an Object SnapShot and visually browse the schema of any Salesforce ORG, including standard objects, custom objects, fields, picklists and more
- Take a Profile SnapShot and visually browse the profile information of any Salesforce ORG, including Field Level Security, Object Permissions, Record Types, Profile Permissions, Tab Visibility, Application Visibility and Assigned Users
- Point and click to push schema from one Salesforce ORG into another ORG. For example, merge and replace objects and fields from a Sandbox ORG into Production
- View and compare multiple SnapShots side-by-side. Compare the same ORG over time or different ORGs
- View Salesforce schema as an entity relationship diagram (ERD) to see Master/Detail and Related List relationships
- Automatically create SnapShots at a scheduled time and store them in a folder
- Import and export SnapShot XML files. Each file represents a particular Salesforce customization
- Export a SnapShot as an HTML or Excel report
